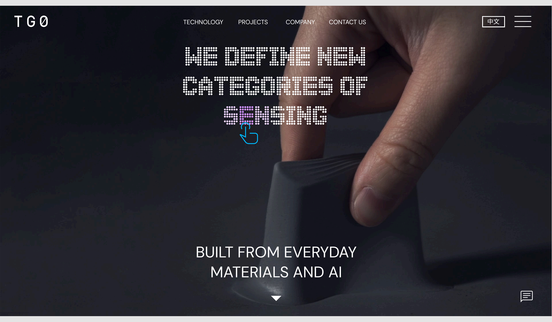
1. INTERACT TO CHANGE COLOUR OF TEXT

Provides an extra bit of pizzaz above the fold



2. INTERACTIVE TWIST w UI + changes scroll speed of client logos

- **Perhaps animation changes depending on where mouse is located over image?**

3. CMF SCROLL + UI + text

- **Unsure if UI can be interactive. Can be scroll otherwise**

33%

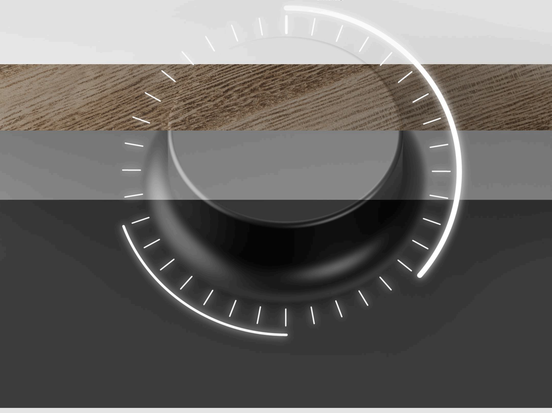
CARBON REDUCTION

Proven 33% reduction in carbon footprint compared to traditional sensor assemblies

80%

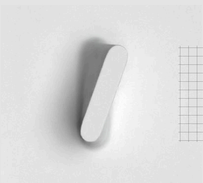
COMPONENT REDUCTION

80% fewer components in standard assemblies (e.g., eliminating 6+ mechanical switches).



4. CORE TECHNOLOGY INTERACTIONS + UI + DATA visualisation

- **We will just use Twist for the POC for now**



```
X:
0, 29, 34, 35, 47, 89

Y:
0, 29, 34, 35, 47, 89

Z:
0, 29, 34, 35, 47, 89
```

TOUCH SENSING

Detect precise contact location and gestures across complex 3D surfaces
Enabling intuitive control without mechanical buttons or sensor matrices.

PRESSURE MAPPING

SHEAR-FORCE

5. SCROLLING EXPLODED VIEW + ANNOTATIONS

- **I've supplied images for now, but Sungjun will supply a mock up video animation in the next day or two**

OUR PLATFORM REPLACES COMPLEX SENSOR NETWORKS WITH AN **OVER-MOULDED MATERIAL STACK** TO ACHIEVE TRUE SIMPLICITY, BEAUTY AND ELEGANCE.

Retain the customer's chosen **surface material**, while adapting seamlessly to any 3D geometry or level of flexibility.

Customized textures are engineered to generate touch signals that are uniquely interpretable by TG0 algorithms.

Specially engineered **internal structures** detect and amplify deformation.

Simple and robust **electrical connections** between the conductive material and the PCB.

Compatible with existing casings or protective layers.

6. INTERACTIVE SLIDER

- **The colour of the text could change as feedback? This one is a bit of fun, and am open to other ideas.**
